

Safe Food

Counter measures in the food industry after a nuclear
accident

Carol Birgersson Consultant

Problems that occur in the initial phase

Contaminated cow milk and food cultivations

Short time problem with Iodine-131 and long time problems with Cesium-137 and Strontium-90

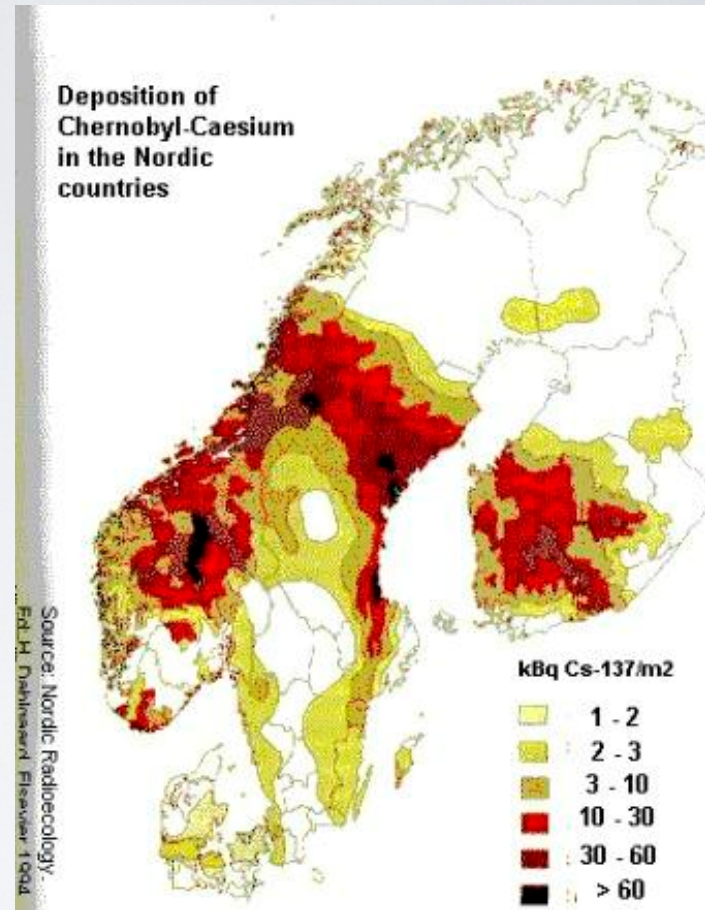

Urgent need to get proper information

The situation very much depend upon the time of year

How prepared
is the food
industry ?

Chernobyl

Counter measures

Radioactive substances cannot be destroyed; they can only be moved or avoided

No tolerance

Analysis capacity

So how do the industry
act?

Alarm systems with action plans

Information

A need for Information

The food producer and the market will need advice from experts to be able to decide on actions

For farmers and industry the situation induce a lot of questions that affect their economy

We don't want any Panic

The situation require a good collaboration between actors to maintain the confidence to the public
